DETAILED ACTION

1. Claims 1-30 are pending.

Election/Restrictions

2. Claims 1-7, 29 and 30 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 5, received 6 November 2002.
3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 8-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Broka et al., US 5,809,483 in view of Mandler et al., US 5,732,400.

Broka discloses in Figs. 21(a) & 21(b) modify quote window 2100 used in an on-line computerized trading system to record trades and quotes within a time duration.

Mandler discloses an on-line computerized trading system to match trades and quotes incorporating a level of risk assessment via a financial clearing house 40 within a time duration. Mandler's risk assessment is deemed automatic.

To provide the trading system of Broka to include a level of risk assessment would have been obvious to one of ordinary skill in the art in view of Mandler. Doing such would incorporate well known business rules criteria to assess whether a trade is to be executed or not.

Regarding Applicant's risk level, aggregate risk level, delta value, beta value, net delta, net contract volume, contract quantity, positive and negative risk, put series options, regeneration increment, etc. and match each with unmatched trades are all common knowledge terms and applications used within the financial investment community. To incorporate these features into the invention of Broka, as modified by Mandler, would have been obvious to one of ordinary skill in the art. Doing such would use common knowledge financial risk and trade analysis information used in business decisions.

6. Applicant's Information Disclosure Statement (IDS) has been received. It is noted that document number 49 (from sheet 3 of 6) was not included with the IDS. Thus, it was not reviewed. Also, document numbers 51-54 are not considered as each does not have an appropriate date to warrant prior art status. The other document numbers, 1-48 and 50, were reviewed. Further, the IDS was corrected with regards to document numbers 25-30 and 35. See the enclosed initialed IDS.

7. Further references of interest:

Horrigan et al., US 6,493,682, discloses a computer based risk aversion management system to optimize trading.

Wallman, US 6,360,210, discloses a computer based risk assessment portfolio management system.
